Introduction

Organization of the manual

To identify plant seeds and fruits, it is important to know to which family of plants they belong. To further identify them to species, one is able to narrow down the possibilities using both the scientific literature and reference collections. Especially in families with many genera, the morphology of fruits and seeds can vary considerably. This variation is a result of the fact that the grouping of genera into families is not only based on characteristics dealing with generative plant parts. In addition, specific adaptations to seed dispersal mechanisms have occurred within more than one family.

To narrow down the identification of fruits and seeds to a particular plant family, it is helpful to have some insight into the way in which the flowers, and in a later stage the fruits, are attached to the plant. It is also important to determine the dispersal unit: a seed, a fruit, or a fruit that has merged with parts of the flower.

This manual illuminates the variation in seeds and fruits belonging to 19 plant families (Figure 1). These particular plant families have been included because the fruits and seeds of the wild plant species of these families often occur both in seed mixtures and in archaeological contexts. The emphasis is on the morphology of the wild species, as expressed in the choice of illustrative examples.

Figure 1  Number of genera (brown, numbers on top axis) and species (green, numbers on bottom axis) per plant family that have been described worldwide (adapted from Mabberley [2008]).
The introduction to each plant family briefly explains issues of taxonomy. Where applicable, attention is paid to nomenclature, subdivisions within the family, and defining characteristics that distinguish the family from other families. Recent DNA research has provided many new insights into the relationship between genera. Based on this research, some families have recently been split, while others have been combined. For this manual, scientific family names based on the type genus are used. The delineation of the families is based on Mabberley (2008).

This short introduction is followed by a paragraph describing the primary types of inflorescence and infructescence within each family. These terms refer to the way in which the flowers, and in a later stage the fruits, are attached to the stem (figure 2). A solid understanding of this distinction can make it much easier to place fruits and seeds in their correct family. Unfortunately, the way in which plants are grouped in terms of inflorescence and infructescence can be quite complicated and, in addition, can be difficult to determine when the pedicels of the flowers or fruits themselves are very short. Another major distinction, which will be elaborated on in the section ‘Fruit and seed’, is between species with multiple fruits and those with compound fruits. For more detail about the varies types of inflorescence, the reader is referred to botanical dictionaries and floras.

A paragraph titled ‘Fruit and seed’ describes the different types of fruits and the variation in seed morphology within the plant family. This manual follows the fruit typology of Spjut (1994). The accompanying photos show fruits and seeds native to various parts of the world whose appearance is representative for the entire family.

The diagnostic features of the fruits and seeds sometimes provide a clue to the plant’s dispersal methods, as noted in the paragraph titled ‘Diaspore’. This paragraph indicates which dispersal units (that is, diasporas) are most commonly found within that particular family. A diaspore is the seed-containing part of the plant, which eventually detaches to ensure the
The creation of offspring in a new location. This dispersal unit can be loose seeds, but it can also be one or more seeds within a fruit or even entire fruits fused to parts of the flower. People often use the term seed dispersal, but what they actually mean is diaspor dispersal, which includes the dispersal of fruits and of fruits fused to parts of the flower.

For plants that are planted and harvested by humans, the dispersal unit can differ from that found in the wild, as determined by the method of harvest and the timing of harvest with respect to the ripening process. This explains why in seed samples we sometimes find dispersal units that deviate from the natural dispersal units (e.g. Cappers & Neef 2012, p. 286). It also explains why we sometimes encounter fragments of the infructescences or vegetative parts such as roots.

The paragraph titled ‘Heterocarpy and seed dimorphism’ discusses a phenomenon encountered in some families whereby a single plant can form more than one type of fruit (heterocarpy) or seed (seed dimorphism). This variation in fruit and seed morphology often relates to differences in dispersal mechanism and even in germination. For example, some species in the family Asteraceae form, within a single flowering head, fruits with a pappus and fruits without a pappus. The fruits with a pappus are adapted to effectively disperse over longer distances, for example by means of wind and/or water. The fruits without a pappus are often smaller, which allows them to more easily penetrate into the ground and thus contribute to a supply of seeds in a spot that has already been proven to be favourable by the mother plant.

Providing a comprehensive overview of the variation in fruit and seed morphology within the selected plant families is beyond the scope of this manual. Instead, a selection of genera that are representative of the respective families is presented. The selection of fruits and seeds in the concise seed atlas that concludes each chapter is mostly based on the Dutch flora (Van der Meijden, 2005). This concise seed atlas depicts fruits and seeds within a frame, accompanied by a scale. In addition, each image includes a silhouette that is depicted at the same scale for each of the images relating to that family (Figure 3). For more extensive images, please refer to the publications of the Digital Plant Atlas project at www.plantatlas.eu.

**Family, genus, and species**

Plants are categorized in a hierarchical system based on relatedness. In the context of this manual, the most important levels are family, genus, and species. Family names and genus names consist of a single word. Species names consist of two words, namely, the genus name and the species name. Family names often end in -eae or -ae. In contrast, the endings of genus and species names vary.

New insights into relatedness have resulted in changes in the nomenclature and even reorganizations within plant families. The recent
large-scale research into certain loci of plant DNA, in particular, has led to species being reassigned to different families. When a species is reassigned to a different family, this need not necessitate changes to the species name. The species name does change, however, if new insights have led to the reorganization of species within a genus or to a species being assigned to a different genus. In order for researchers to be able to make the link between the new, so-called valid name and the older, so-called invalid name, the author's name is added after the species name.

Some species are subdivided into subspecies or varieties. In that case, a third name is added to the species name, preceded by the abbreviation ssp. (subspecies) or var. (variety). Scientific names for genus, species, subspecies, and variety are set in italics; family names are not. The common names are written with a capital letter on the first word to avoid any confusion between adjectives and words belonging to the proper name of the plant (for example, creeping Cockspur versus Creeping Buttercup). If a plant has no common name, the binomial is given without parentheses. Nomenclature of common English names of plant follows Stace (2010).

**Types of seeds and fruits**

A seed develops from an ovule and becomes enclosed by a fruit or aril (figure 4). Plants whose seeds are not enclosed by a fruit mostly produce their seeds in cones and are often called gymnosperms (figure 5).

In angiosperms the ovules and thus the developing seeds are enclosed by a fruit. The distinction between seed and fruit presents no problem if the seed does not connate with the fruit (figure 6). Often the seed is an independent dispersal unit.

There are also plants in which the seed and fruit connate. One-seeded fruits in which the fruit is often not much larger than the seed are frequently wrongly called ‘seed’ (figure 7).

When the fruit is the dispersal unit, other plant parts may also become part of the dispersal unit. This may result in the fruit itself not being visible anymore. An example of plant parts that may partially or completely enclose the fruit are bracts. In cereals, such bracts can be distinguished as separate pieces of chaff (figure 8). In some species, these types of bracts are fused, as is the case with the green husk surrounding the fruit of the Walnut (figure 9). In the latter case, the tissue surrounding the fruit is sometimes referred to as the exocarp.

Some fruits are composed of visibly distinct layers. This is the case for stone fruits. In such fruits the inner layer is firm and is called endocarp. The endocarp is often enclosed by a middle layer, called mesocarp, and an outer layer, called epicarp. An example of a stone fruit with a clear differentiation in layers is the Olive (figure 10). Sometimes the term exocarp is used instead of epicarp. In accordance with Spjut (1994), in this manual we use the term exocarp only for those plant parts that are not part of the fruit, e.g. the husk surrounding the fruit of a Walnut (figure 9).
Introduction

Figure 5
Cone and seed of the Giant sequoia (Sequoiadendron giganteum).

Figure 6
Longitudinal section of the Melon (Cucumis melo), a fruit with seeds.

Figure 7
Complete fruit of the Sunflower (Helianthus annuus) and a longitudinal section of the fruit containing the seed.

Figure 8
Fruit of the Einkorn (Triticum monococcum) covered by chaff (left) and without chaff (right). Cereals have 1-seeded fruit.

Figure 9
Fruit of the Walnut (Juglans regia) with part of the exocarp (left), fruit without exocarp (middle), and a longitudinal section of a fruit containing the seed (right).

Figure 10
Complete fruit of the Olive (Olea europaea) (left), fruit whose mesocarp and epicarp (shell) were half removed (middle), and a cross-section through the fruit and seed (right). The epicarp and mesocarp are purple in colour, the endocarp is brown, and the seed is white.

Figure 11
Infructescence of the Elderberry (Sambucus nigra).

Figure 12
Multiple fruit of the Yellow-flowered strawberry (Potentilla indica) (top). A highly magnified fleshy axis contains a large number of small, 1-seeded fruit (bottom).

Figure 13
Exterior (top) and longitudinal section (middle) of the compound fruit of the Fig (Ficus carica). The fleshy axis is closed but for a small opening at the bottom. At the receptacle there are several hundred flowers. After pollination by a Fig wasp, a 1-seeded fruit may develop in each of these flowers (bottom).
Flowers are often arranged in a characteristic pattern. This pattern is called inflorescence, and the various types are indicated with specific terms. The term infructescence is used for a characteristic arrangement of fruit (figure 11).

In this manual no specific terms are used for the different ways fruits can be arranged. However, in accordance with Spjut (1994), we distinguish between simple fruits, multiple fruit, and compound fruit. A simple fruit develops from a single flower with a more or less isolated position in the infructescence. A multiple fruit develops from one flower with multiple pistils. In the ovary of each pistil, one or more seeds ripen (figure 12). A compound fruit develops from several flowers, each with its own pistil (figure 13). The transition from compound fruit to infructescence may sometimes be arbitrary.

PLANT FAMILY
Amaranthaceae  Love-lies-bleeding (*Amaranthus caudatus*)
Introduction

The Amaranthaceae family is named after the genus Amaranth (*Amaranthus*). Plants in the Goosefoot family have recently been subsumed under the Amaranth family. Genetic research has proven that the Goosefoot family and the Amaranth family are closely related; distinguishing between them at the taxonomic level of family is therefore no longer desirable. The Amaranth family now contains about 2000 species in 175 genera.

Inflorescence and infructescence

The flowers are small. Because of their green or brown colour, they are not very noticeable. The flowers and fruits are united in tight clusters distributed over the length of the stem or at the end of the stem (figure 1).

The fruit is sometimes surrounded by a perianth (the collective name for the sepals and petals) and bracteoles. During fruiting, the perianth and bracteoles can become enlarged and partly or completely surround the fruit. In Oraches (*Atriplex*), the fruit is surrounded by two bracteoles that have fused together distally. These bracteoles vary in morphology and size within Oraches and can be toothed and nubbly. Sometimes the perianth is noticeably swollen, as in the Strawberry goosefoot (*Chenopodium foliosum*) (figure 2).

Fruit and seed

In some genera, such as Amaranth (*Amaranthus*), the fruit and seed are not fused together. The fruit of Amaranths is membranous and contains a single seed. This seed is disc-shaped and usually black and shiny. Because the seeds of the different species in this genus are similar in shape, they are usually not identified below the genus level. A species determination is, however, possible based on the characteristics of the fruit and the perianth. In some (sub) species, such as Indehiscent amaranth (*Amaranthus*
Figure 2  Strawberry goosefoot (*Chenopodium foliosum*) with fruits surrounded by red, swollen perianths.
hybridus ssp. bouchonii), the fruit does not open, whereas in other (sub) species the fruit opens transversely. In the latter case, the surface of the break can be irregular, as in Guernsey pigweed (A. blitum), or regular, as in Short-tepalled pigweed (A. graecizans) (figure 3).

In many other genera, the fruit and seed are fused together. In some of these genera the fruit wall is thin, fragile, and easily separated from the seed. This kind of fragile fruit wall occurs in Summer-cypress (Bassia), Perennial glasswort (Salicornia), Spinach (Spinacia), Saltworts (Salsola), Goosefoots (Chenopodium), and Oraches (Atriplex). Of those Goosefoots and Oraches that occur in cultivated fields, it is often the seeds rather than
intact fruits that are found, because the fragile fruit is removed during threshing (Berggren, 1981). In the Goosefoots, the outermost layer of the fruit is also referred to as ‘exocarp’ (Berggren 1981; Cappers et al., 2012). Here, both layers are considered part of the fruit (figure 4).

Winged fruits occur in Bugseed (Corispermum) and Saltworts (Salsola). In Bugseed, the wings are formed by the margins of the fruit, whereas in Saltworts the wing is formed by the perianth that surrounds the fruit. The seed of Glassworts (Salicornia) is partly covered with hooked hairs (figure 5).

The orientation of the fruit in the perianth can be horizontal or vertical (figure 6). The fruits of Oraches are all oriented vertically, while within the genus Goosefoots both orientations occur. In the case of horizontal orientation, the fruit is attached to the receptacle along the flattened side. These kinds of fruits have a scar on just one side, in the middle. This scar is often still visible under oblique light on the seed itself, as in Fat-hen (Chenopodium album) (figure 4, bottom centre). Fruits oriented vertically on the receptacle lack this scar, as in Clammy goosefoot (C. pumilio) (figure 6).
Diaspore

The dispersal unit can be the seed; the 1-seeded fruit; or the 1-seeded fruit with perianths, bracteoles, or a swollen receptacle (table 1).

Heterocarpy and seed dimorphism

Heterocarpy is common in this family. For example, the type of perianth surrounding the fruits of Saltmarsh goosefoot (*Chenopodium chenopodioides*) varies depending on the fruit’s location along the stem (figure 7).

The variation in the bracteoles in Oraches (*Atriplex*) relates to the position of the fruit on the plant. In some species the fruit also varies in size and shape. Therefore it is not always possible to obtain a secure species-level identification. The variation is especially great in such species as Common orache (*Atriplex patula*), Spear-leaved orache (*A. prostrata*), and Grass-leaved orache (*A. littoralis*). The fruits of the first two of these species are usually not differentiated; only large fruits (with a diameter of at least 3.2 mm) are identified as Grass-leaved orache. The fruits of Halogeton *Halogeton glomeratus* and Fat-hen (*Chenopodium album*) and the seeds of Common glasswort (*Salicornia europaea*) are also heterocarpic (Imbert, 2002).

The number of fruits in fruit clusters of the Beet (*Beta vulgaris*) varies from (1-)3-5(-7). In the Beet from the eastern Mediterranean, the number of fruits is small.

Variation in the shape of the fruit can also be the result of the selection of seed stock. For example, the bracteoles of Spinach (*Spinacia oleracea*) possess a spine. This spine is absent in fruits used today as seed stock (figure 8).

Perennial glasswort, 19
Perennial rye-grass, 19
Phacelia, 67, 71, 75
Pink family, 95
Plantains, 175-176, 179, 181
Pod mahogany, 133
Prickly lettuce, 51
Purple amaranth, 17
Quaking-grass, 195
Red dead-nettle, 159
Redshank, 220, 222, 224
Restharrows, 133
Rhubarb, 217
Rhubarbs, 221-222
Ribwort plantain, 178-179, 181
Rice, 187, 189
Rose family, 229, 241
Rose of Jericho, 85
Roselle, 167
Rosemary, 159
Rough cocklebur, 52
Round-fruited rush, 154
Ruptureworts, 97
Rush family, 109, 153
Rushes, 153, 187
Rye, 187, 201-202, 205
Rye-grasses, 188
Sainfoin, 131
Saltmarsh flat-sedge, 113
Saltmarsh goosefoot, 21-22
Saltworts, 19-20
Sand sedge, 115
Sandworts, 96
Sanicle, 31
Savory, 159
Scottish dock, 221-222
Sea club-rush, 109, 113
Sea mayweed, 52
Sea plantain, 176
Sea rocket, 79-80, 85
Sea rush, 154
Sea-hollies, 31, 33
Sea-kale, 78-80
Sea-spurreys, 97
Sedge family, 109
Sedges, 110-112, 114, 116, 187, 218, 220
Shoreweed, 175, 179
Short-tepalled pigweed, 19
Sickle medick, 134
Silverweed, 137
Skullcap, 157-158
Skullcaps, 159
Slender rush, 153
Slender tufted-sedge, 114
Small mallow, 166-167
Small melilot, 134
Small toadflax, 176
Small-flowered crane's-bill, 148
Smooth tare, 124
Snapdragon, 181
Soft-rush, 152-153
Soybean, 133
Spanish broom, 126
Spanish-needles, 50
Spear-leaved orache, 22
Speedwells, 175-176
Spelt, 201, 205
Spignel, 35
Spike-rushes, 114
Spinach, 19, 22
Spotted dead-nettle, 157-158
Spurreys, 97
St Lucie cherry, 247
Starry lady's-mantle, 241
Steeple-bush, 244
Stocks, 83
Strapwort, 97
Strawberry goosefoot, 17-18
Subterranean clover, 137, 138
Sugar cane, 187
Summer pheasant's-eye, 233
Summer-cypress, 19
Sunflower, 11, 49-50
Sweet cicely, 35-36
Sweet vernal-grass, 188
Swine-cress, 77, 79
Tall melilot, 125
Tansy, 47
Teak, 157
Thistles, 45, 51, 53
Thorn-apple, 256
Thorn-apples, 255
Three-nerved sandwort, 97
Tidy-tips, 52
Toadflaxes, 181
Tobaccos, 255
Tomato, 257
Tomatoes, 255
Toothed medick, 129
Touch-me-not, 129-130
True fox-sedge, 115
Tufted sedge, 115
Twisted acacia, 134
Velvetleaf, 165, 170
Vervain family, 157
Vetches, 123-133
Wall barley, 193
Wall lettuce, 48
Wall speedwell, 176
Walnut, 10-12
Waterleaf family, 67
Water-pepper, 219, 221
Water-starworts, 181
Wheat, 187, 195, 197, 201, 205
White beak-sedge, 110, 113-114
White campion, 95
White henbane, 256
White lupin, 131
White sedge, 113
Wild basil, 159
Wild carrot, 29, 34
Wild cherry, 247
Wild emmer, 200
Wild plum, 247
Wild radish, 82-85
Wild strawberry, 246
Wild-oat, 193, 198, 200
Willow dodder, 104
Winter wild-oat, 198, 200
Wood avens, 245-246
Wood dock, 221
Wood speedwell, 177
Wood-rushes, 153
Woundworts, 159
Yellow chamomile, 45, 50
Yellow-flowered strawberry, 11, 245
Yew, 11
Yorkshire-fog, 186
Index 2 Scientific names

Abutilon, 165, 170
Abutilon theophrasti, 170-171
Acacia nilotica, 124
Acacia tortilis, 134
Acanthospermum hispidum, 57
Aconitum, 231, 233
Aconitum vulparia, 231, 236
Actaea, 230-231, 233-234, 236
Actaea pachypoda, 234
Actaea spicata, 236
Adonis, 231-232
Adonis aestivalis, 233
Adonis flammea, 236
Aethionema, 85
Aethusa cynapium, 38
Ageratina altissima, 57
Ageratum conyzoides, 57
Ageratum houstonianum, 57
Agrimonia, 245
Agrimonia eupatoria, 250
Agrostemma githago, 98
Agrostis nebulosa, 188
Ajuga, 157, 159
Ajuga reptans, 160
Alcea, 164-166, 170
Alcea rosea, 170-171
Alchemilla, 241, 245
Alchemilla glabra, 250
Alhagi graecorum, 139
Alliaria petiolata, 86
Alopecurus, 194
Alopecurus myosuroides, 206
Alopecurus pratensis, 206
Althaea, 165-166, 170
Althaea hirsuta, 171
Alysicarpus monilifer, 138
Alyssum alyssoides, 86
Amaranthaceae, 7, 16, 21
Amaranthus, 17, 21
Amaranthus blitum, 19
Amaranthus caudatus, 16
Amaranthus cruentus, 17
Amaranthus graecizans, 19
Amaranthus hybridus ssp. bouchonii, 17
Amaranthus standleyanus, 23
Ambrosia artemisiifolia, 57
Ambrosia psilostachya, 58
Ambrosia trifida, 58
Amelanchier, 245
Amelanchier lamarckii, 243, 250
Anastatica hierochuntica, 85
Anchusa arvensis, 73
Anemone, 231-232
Anemone nemorosa, 236
Anemone nemorosa, 236
Ammi majus, 38
Amphicarpaea bracteata, 138
Amsinkia micrantha, 73
Anthemis cotula, 52-53, 58
Anthemis tinctoria, 45, 50
Anthoxanthum, 192
Anthoxanthum odoratum, 188, 206
Anthriscus caucalis, 39
Anthriscus sylvestris, 33
Anthriscus sylvestris, 33
Antirrhinum, 127
Antirrhinum majus, 183
Aphanes, 241
Apiaceae, 7, 28, 166
Aphyum, 29
Aphyum graveolens, 39-40
Aquilegia, 231
Aquilegia vulgaris, 236
Arabidopsis thaliana, 86
Arabis hirsuta ssp. hirsuta, 86
Archis hypogaea, 137
Araliaceae, 29
Arctium, 53
Arctium minus, 58
Arenaria, 96
Arenaria serpyllifolia, 98
Aronia, 245
Aronia x prunifolia, 243, 250
Artemisia vulgaris, 58
Aruncus, 244-245, 250
Aruncus dioicus
Asperugo procumbens, 73
Aster, 45
Asteraceae, 7, 9, 29, 44, 123, 229, 245
Astraugus, 128-129
Astraugus eremophillus, 128
Astraugus glycyphylos, 139
Atropa, 17, 19, 21-22
Atropa belladonna, 22
Atriplex patula, 22
Atriplex prostrata, 22-23
Atropa, 255
Atropa belladonna, 258
Aubrieta deltoidea, 86
Avena, 187, 192, 198, 201, 205
Avena fatua, 193, 198, 200, 207
Avena sativa, 198, 201, 205, 207
Avena sterilis, 198, 200, 207
Avena stricta, 205
Ballota nigra ssp. meridionalis, 160
Bambusa, 187
Baptisia australis, 127
Barrera vulgaris, 86
Bassia, 19, 21
Bassia scoparia, 24
Berteroa incana, 87
Beta, 21
Beta vulgaris, 22, 24
Bidens bipinnata, 50
Blysmus, 109, 112
Blysmus compressus, 113
Blysmus rufus, 113, 117
Bolboschoenus, 109, 112
Bolboschoenus maritimus, 109, 113, 117
Bombacaceae, 165
Boraginaceae, 7, 66, 157
Borago, 67
Borago officinalis, 67, 71, 73
Brassica, 77
Brassica juncea, 77
Brassica napus, 77
Brassica oleracea, 77
Brassica rapa, 77
Brassicaceae, 7, 76
Briza media, 195
Brunnera macrophylla, 73
Bunias orientalis, 87
Caesalpinioideae, 123-125, 127, 133-134
Cakile maritima, 79-80, 85, 87
Calamintha, 157
Calendula officinalis, 53-54, 59
Calepina irregularis, 87
Callistephus chinensis, 59
Callitrichaceae, 175, 178
Callitriche, 175-176, 178, 181-182
Callitrichaceae, 181
Callitriche hermaphrodita, 183
Callth, 231
Callth paulestris, 232-233, 236
Callth paulestris ssp. paulstrius, 236
Camelina sativa ssp. sativa, 87
Canavalia ensiformis, 131, 133
Capsella bursa-pastoris, 81-82, 88
Cardamine chenopodifolia, 85
Cardamine pratensis, 88
Carduus, 51
Carduus acanthoides, 59
Carduus crispus, 59
Carduus nutans, 45-46, 59
Carex, 112, 114, 116, 220
Carex acuta, 114
Carex arenaria, 115
Carex crawfordii, 115
Carex curta, 113
Carex disticha, 111-112
Carex elata, 115
Carex extensa, 113
Carex flaccenta, 114, 218
Carex hirta, 115
Carex lepidocarpa, 117
Carex oederi ssp. oedocarpa, 111-112
Carex otrubiae, 114
Carex spicata, 117
Carex vesicaria, 116
Carex vulpina, 115
Carthamus tinctorius, 60
Caryophyllaceae, 7, 94
Caryophyllus, 95
Centaurea benedicta, 60
Centaurea cyanus, 45, 47
Centaurea scabiosa, 45, 47
Centaurea solstitialis, 60
Cerastium, 96, 98
Cerastium fontanum, 96, 98
Cerastium fontanum ssp. vulgare, 96, 98
Cerinthe, 67, 71
Cerinthe major, 71
Chaenorhinum, 175-176, 178, 181
Chaenorhinum minus, 176, 183
Chaenorhinum origanifolium, 181
Chaerophyllum temulum, 40
Chenopodium, 19, 21
Chenopodium album, 20, 22
Chenopodium chenopodioides, 21-22
Chenopodium foliosum, 17-18
Chenopodium polyspermum, 21
Chenopodium pumilio, 20-21
Chenopodium rubrum, 24
Chondrilla juncea, 60
Cicer arietinum, 139
Cichorium endivia, 60
Cichorium intybus, 60
Cirsium, 53
Cirsium aculeolum, 61
Cirsium arvense, 61
Cladium, 112
Cladium mariscus, 114-116, 118
Clematis, 231
Clematis vitalba, 232, 237
Clinopodium acinos, 160
Clinopodium vulgare, 159
Cochlearia danica, 88
Coeinca monensis, 88
Columella, 127
Columella arborescens, 128, 139
Comarum, 245
Comarum palustre, 246, 250
Compositae, 45
Conium maculatum, 40-41
Conringia orientalis, 88
Consolida, 230-231, 233
Consolida regalis, 237
Convolvulaceae, 7, 102
Convolvulus, 103
Convolvulus arvensis, 104, 106
Convolvulus sepium, 102
Cordia, 71-72
Cordia myxa, 72
Coriandrum sativum, 9, 32-33, 41
Corispermum, 20-21
Corispermum intermedium, 25
Corrigiola, 97
Corrigiola litorisalis, 98
Corynephorus canescens, 192-193
Cotoneaster, 245
Cotoneaster integerrimus, 251
Crane maritima, 78-80, 88
Crataegus, 245
Crataegus monogyna, 251
Crotalaria juncea, 139
Cruciferae, 77
Cryptis aculeata, 189
Cucubalus baccifer, 97
Cucumis melo, 11
Cuminum cuminum, 41
Cuscuta, 103
Cuscuta europaea, 106
Cuscuta pedicellata, 103
Cuscutaceae, 103
Cymbalaria, 175-176, 178, 181
Cymbalaria muralis, 183
Index 2 Scientific names 267

Cynodon dactylon, 208
Cynoglossum officinale, 71, 73
Cyperaceae, 7, 108, 187, 218
Cyperus, 112
Cyperus conglomeratus, 110-111
Cyperus esculentus, 118
Cytisus scoparius, 140
Dactylolentenium, 198
Dactylolentenium aegypticum, 198
Datura, 255
Datura stramonium, 256, 258
Daucus carota ssp. carota, 29, 34
Daucus carota ssp. sativus, 34-35
Delonix regia, 124
Descurainia sophia, 89
Dianthus caryophyllus, 95
Dianthus deltoides, 98
Dichantium, 194
Digitalis, 175-176, 178
Digitalis purpurea, 175-176, 178
Digitaria sanguinalis, 197, 208
Dimorphotheca pluvialis, 52
Diplotaxis muralis, 89
Draba muralis, 89
Echinacea angustifolia, 61
Echinochloa crus-galli, 208
Echinops, 48
Echinops, 48
Echium, 67
Echium vulgare, 70, 74
Eclipta prostrata, 61
Eleocharis, 112, 114
Eleocharis multicaulis, 118
Eleocharis palustris, 114
Eleogiton, 109, 112
Eleogiton fluitans, 109-110, 118
Elytrigia repens, 188-192
Emex spinosa, 222, 224-225
Entada, 129
Eranthis, 231
Eranthis hyemalis, 237

Hydrocotyle, 29
Hydrophyllaceae, 67
Hyoscyamus, 255
Hyoscyamus albus, 256
Hyoscyamus niger, 257-258
Hyssopus, 157, 159
Hyssopus officinalis, 160
Iberis umbellata, 90
Illecebrum, 97
Illecebrum verticillatum, 99
Inula conyzae, 62
Illecebrum, 97
Ipomoea, 105
Ipomoea carnea, 105
Isolepis, 109, 112
Isolepis setacea, 109-110, 119
Iva xanthifolia, 62
Jacobaea vulgaris, 62
Juglans regia, 11
Juncaceae, 7, 109, 152, 187
Juncus, 153-154
Juncus acutiflorus, 155
Juncus compressus, 154
Juncus effusus, 152-153
Juncus maritimus, 154
Juncus squarrosus, 154
Juncus tenuis, 153
Kickxia, 175-176, 178, 181
Kickxia elatine, 184
Labiatae, 157
Lablab purpureus, 140
Laburnum anagyroides, 141
Lactuca sativa, 63
Lactuca serriola, 51
Lagurus ovatus, 194
Lamiaceae, 7, 70, 156
Lamiastrum galeobdolon ssp. galeobdolon, 161
Lamium, 157, 159
Lamium maculatum, 157-158
Lamium purpureum, 159, 161
Lappula squarrosa, 74
Lapsana communis, 48, 63
Laserpitium latifolium, 33
Lathyrus, 133
Lathyrus ciliolatus, 138
Lathyrus latifolius, 126
Lathyrus sativus, 138, 141
Lathyrus sylvestris, 141
Layia platyglossa, 52
Leersia oryzoides, 188-189
Leguminosae, 123
Lens culinaris, 132, 141
Leontodon saxatilis, 53, 55-56
Leonurus cardiaca, 161
Lepidium coronopus, 77, 79
Lepidium didymum, 90
Lepidium sativum, 91
Leucaena leucocephala, 141
Leucanthemum paludosum, 52-53
Leucanthemum vulgare, 48, 63
Leymus arenarius, 190
Limosella, 175-176, 178
Limosella aquatica, 181, 184
Linaria, 175-176, 178, 181
Linaria arvensis, 181
Linaria vulgaris, 184
Lithospermum arvense, 74
Littorella, 175-176, 178-179, 182
Littorella uniflora, 175, 179, 184
Lobularia maritima, 91
Lolium, 188
Lolium multiflorum, 210
Lolium perenne, 189, 210
Lolium remotum, 210
Lolium temulentum, 198-199
Lotus pedunculatus, 141
Lunaria annua, 76, 81-84, 91
Lupinus, 133
Lupinus albus, 131
Lupinus angustifolius, 142
Luzula, 153-154
Luzula campestris, 154
Luzula multiflora, 155
Lycium, 255
Lycium barbarum, 258
Lycopersicon, 255
Lycopersicon esculentum, 255
Lycopersicon lycopersicum, 255
Malacothamnus, 33
Malaceae, 7, 164
Marrubium vulgare, 161
Matricaria chamomilla, 63
Matthiola, 83
Matthiola tricuspis, 83

Pisum sativum, 136, 143
Plantaginaceae, 7, 174
Plantago, 175-176, 178-179, 181
Plantago arenaria, 176
Plantago coronopus, 182
Plantago lanceolata, 178-179, 181, 185
Plantago major, 174, 176, 181
Plantago maritima, 176
Poa, 187
Poa pratensis, 213
Poaceae, 7, 109, 123, 186
Polycarpon tetraphyllum, 100
Polycnemum arvense, 25
Polygonaceae, 7, 216
Polygonum, 217, 221
Polygonum aviculare, 216, 218, 220, 226
Potentilla, 245-246
Potentilla anserina, 137
Potentilla indica, 11, 245
Potentilla tabernaemontani, 252
Prosopis farcta, 143
Prunella vulgaris, 162
Prunus, 241, 245-246
Prunus avium, 247
Prunus cerasifera, 247
Prunus cerasus, 247
Prunus domestica, 247, 252
Prunus domestica ssp. domestica, 252
Prunus dulcis, 247
Prunus mahaleb, 247
Prunus persica, 247
Pulicaria dysenterica, 229
Pulmonaria officinalis, 71, 75
Pulsatilla, 231
Pulsatilla vulgaris, 232, 238
Pyrus, 245
Pyrus communis, 252
Ranunculaceae, 7, 228
Ranunculus, 229, 231-232
Ranunculus arvensis, 232-233
Ranunculus bulbosus, 238
Ranunculus lingua, 228-229
Ranunculus peltatus, 233
Ranunculus sardous, 232-233
Ranunculus sceleratus, 232-233
Ranunculus subgen. Batrachium, 232
Ranunculus subgen. Ranunculus, 232
Raphanus raphanistrum, 82-85, 92
Rapistrum rugosum, 92
Rheum, 221-222
Rheum x hybridum, 217
Rheum x hybridum, 217
Rhyynchospora, 112, 114
Rhyynchospora alba, 110, 113-114
Rhyynchospora fusca, 113, 119
Robinia pseudoacacia, 143
Rorippa palustris, 77, 92
Rosa, 245
Rosa canina, 240
Rosa villosa, 252
Rosaceae, 7, 229, 240
Rosmarinus, 157, 159
Rosmarinus officinalis, 162
Rubus, 241, 245, 248
Rubus fruticosus, 248
Rumex, 217, 220-222
Rumex acetosa, 217, 220
Rumex acetosella, 217, 227
Rumex aquaticus, 221-222
Rumex conglomeratus, 221-222
Rumex crispus, 227
Rumex obtusifolius, 220, 227
Rumex palustris, 221-222
Rumex sanguineus, 221
Saccharum, 187
Sagina nodosa, 100
Salicornia, 19-21
Salicornia europaea, 20, 22, 25
Salsola, 19-21
Salsola kali, 26
Salvia, 157, 159
Salvia pratensis, 159
Salvia verticillata, 163
Sambucus nigra, 11
Sanguisorba, 245
Sanguisorba minor, 253
Sanicula, 31
Saponaria officinalis, 100
Satureja, 157
Satureja hortensis, 159, 163
Scandix pecten-veneris, 35-36
Schismus, 198
Schismus arabicus, 198
Schoenoplectus, 109, 112
Schoenoplectus tabernaemontani, 119
Schoenus, 112
Schoenus nigricans, 119
Scolymus hispanicus, 64
Scrophulariaceae, 175, 178
Scutellaria columnae, 163
Scutellaria, 159
Scutellaria galericulata, 157-158
Secale, 187, 201
Secale cereale, 202, 205, 213
Securigera, 129-130
Securigera varia, 143
Senna occidentalis, 134
Sequoiodendron giganteum, 11
Sesbania sesban, 144
Setaria pumila, 213
Setaria viridis, 214
Silene, 96
Silene baccifera, 97
Silene dioica, 101
Silene latifolia, 95
Silene vulgaris, 94, 96
Silybum marianum, 64
Sinapis arvensis, 79-80, 83-85, 92
Sisymbrium altissimum, 92
Solanaceae, 7, 254
Solanum, 255
Solanum dulcamara, 254, 256
Solanum esculentum, 257
Solanum nigrum, 257, 259
Solanum nigrum ssp. nigrum, 259
Solanum nigrum ssp. schultesii, 257
Sonchus arvensis, 64
Sonchus asper, 64
Sonchus oleraceus, 64
Sorbaria, 244-245
Sorbaria ordónízii, 253
Sorbaria tomentosa, 242
Sorbus, 245
Sorbus aucuparia, 253
Sorghum, 187, 201
Sorghum bicolor, 204-205, 214
Sorghum halepense, 214
Spartium junceum, 126
Spergula, 97
Spergula arvensis, 101
Spergularia, 97
Spergularia media, 97, 101
Spergularia salina, 97
Spinacia, 19, 21
Spinacia oleracea, 22, 26
Spiraea, 244-245
Spiraea douglasii, 244
Spiraea salicifolia, 253
Stachys, 159
Stachys arvensis, 163
Stellaria media, 101
Sterculiaceae, 165
Suada, 21
Suada maritima, 26
Subularia aquatica, 92
Symphytum officinale, 66-67, 69, 71, 75
Tagetes minuta, 64
Tamarindus indica, 144
Tanacetum vulgare, 47
Taraxacum officinale, 44, 65
Taxus baccata, 11
Tectona grandis, 157
Teesdalia nudicaulis, 93
Tetragonolobus maritimus, 144
Teucrium, 157, 159
Teucrium botrys, 163
Teucrium montanum, 159
Thalictrum, 231
Thalictrum flavum, 238
Thlaspi arvense, 78, 83, 93
Thymus, 157
Thymus vulgaris, 163
Tilia, 166, 170
Tilia platyphyllos, 173
Tilia x vulgaris, 168-169
Tiliaceae, 165
Tordylium apalum, 30
Torilis nodosa, 36-37, 43
Trachyspermum ammi, 31
Trichophorum, 109, 112
Trichophorum cespitosum ssp. germanicum, 109-110, 120
Trifolium, 133
Trifolium dubium, 144
Trifolium glomeratum, 134
Trifolium subterraneum, 137-138
Trigonella foenum-graecum, 125, 144
Tripleurospermum maritimum, 52, 65
Triticum, 187, 195, 201
Triticum aestivum, 196-197, 201, 205, 215
Triticum aestivum ssp. aestivum, 196-197, 201, 205
Triticum aestivum ssp. spelta, 201, 205
Triticum monococcum ssp. monococcum, 195, 201, 205
Triticum turgidum, 194-195, 197, 200-201, 205, 215
Triticum turgidum ssp. dicoccoides, 200
Triticum turgidum ssp. dicoccon, 195, 200, 205
Triticum turgidum ssp. durum, 194, 197, 201, 205, 215
Ulex europaeus, 144
Umbelliferae, 29
Vaccaria hispanica, 101
Verbenaceae, 157
Verbesina encelioides, 65
Veronica, 175-176, 178
Veronica arvensis, 176
Veronica montana, 177
Veronica praecox, 185
Veronicaceae, 175, 178
Vicia, 133
Vicia ervilia, 145
Vicia faba, 123
Vicia hirsuta, 131, 133, 137
Vicia sativa, 122, 138, 145
Vicia sativa ssp. amphicarpa, 138
Vicia sativa ssp. sativa, 145
Vicia tetrasperma, 124
Vigna radiata, 145
Vigna umbellata, 145
Vigna unguiculata ssp. unguiculata, 145
Wisteria sinensis, 123
Xanthium, 48, 53
Xanthium spinosum, 65
Xanthium strumarium, 52, 65
Zea, 187, 201
Zea mays, 204-205, 215
Zizania palustris, 215
Index 3  Glossary of botanical terms

Achenetum, 245
Amphicarpy, 85, 138
Angiosperms, 10
Anthocarp, 244
Aril, 10-11, 133
Awn, 192-193, 196, 200
Beak, 35, 51, 79-80, 82-85, 110, 113-114, 148-149
Berry, 97, 230-231, 233-235, 255, 257
Bilomentum, 82
Bract, 110-111, 114-115, 124, 153, 170, 187-188
Bristle, 109-110, 112-114, 116, 205
Calyx, 33, 50, 68-72, 96-97, 129, 131, 157-159, 166-167, 177, 180, 244, 255-257
Calyx-tooth, 33
Camara, 127, 129, 136
Camptulum, 45-46, 48-50, 54, 109, 124-125, 153, 229
Capsule, 71-72, 96, 103, 166-167, 178-182, 232, 255-257
Carpophore, 31, 33
Caryopsis, 194
Chaff, 10-11, 189, 198, 201
Columella, 148-149
Compound fruit, 8, 11-12, 229, 245
Cone, 10-11
Core, 248-249
Corona, 134
Corymbose inflorescence, 77-78, 125, 241
Corymbose infructescence, 243
Cotyledons, 131-132
Craspedium, 127, 129, 136
Cyme, 67, 69-70, 95, 103, 217, 255-256
Cypsela, 113
Dichasial cyme, 241
Dicotyledons, 45
Drupe, 71-72, 245-248
Drupetum, 245
Elaicosome, 71, 97, 154, 159, 232-233
Embryo, 131-132, 194
Endocarp, 10-11, 71-72, 246-248
Epicalyx, 166
Epicarp, 10-11, 71, 247
Endocarp, 10-11, 71-72, 246-248
False fruit, 244
False septum, 70-71, 81, 128-129, 256
Follicetum, 245
Follicle, 230-233, 235, 244, 249
Fruit wall, 19, 33, 35, 71
Funicle, 79, 83-84, 125, 128, 131, 133-136
Funicular residue, 131, 133
Funicle, 79, 83-84, 125, 128, 131, 133-136
Funicle, 79, 83-84, 125, 128, 131, 133-136
Glandetum, 245
Glandular hair, 148, 157
Glandular scale, 157
Glume, 188-194, 196, 199, 201-202, 204
Gymnosperms, 10
Heterocarp, 9
Hilar groove, 133-135
Hilar region, 134-135
Hilar rim, 133-135
Hilum, 50, 70-71, 103, 131, 133-135, 159, 194-195, 197-198
Involucral leaf, 46, 53, 55-56
Legume, 127, 129, 131, 136
Lemma, 188-189, 192-194, 196, 199, 201-204
Legume, 127, 129, 131, 136
Lens, 134-135
Locule, 70-71, 81, 84, 103, 154, 166, 249, 256
Lodicule, 188
Lomentum, 127, 129, 136
Mericarp, 31-37, 70-72, 148-149, 157-159, 166-167, 170, 181-182
Mesocarp, 10-11, 71, 247-248
Microple, 133-135
Monochasium, 67
Multiple fruit, 8, 11-12, 229, 244-246, 248-249
Ovary, 12, 110, 154, 230, 244, 246-249
Ovule, 10, 70, 82, 126, 131, 248
Paler, 188-189, 193-194, 199, 201, 204
Panicle, 8, 109, 153, 187-188, 230, 241-242
Pappus, 9, 50-51, 53, 55-56
Pedicel, 8, 69, 77, 79, 81-82, 84, 125, 137, 166, 168, 187, 199, 217
Perianth, 17, 20-22, 110, 125, 153-154, 177-178, 187-188, 217, 220-225, 246
Pericarpium, 244
Pistil, 12, 33, 50, 177, 188, 229-230, 232, 244, 246-249
Placenta, 79, 81-82, 84, 96, 170, 179-180, 255
Pleurogram, 133-134
Pome, 245, 248-249
Pometum, 245, 249
Pseudoanthocarp, 9
Raceme, 77, 78, 109, 125, 165, 176-177, 187, 217, 230-231, 234, 241, 243, 255
Rachilla, 111, 190-192, 194, 199
Rachis, 114, 187, 190, 192-194, 198, 200, 202
Radicle, 133-134
Receptacle, 11, 20, 21, 45-47, 50, 53, 56, 70, 82, 229-230, 233, 241, 244-246, 248-249
Replum, 129, 136
Schizocarp, 31, 37, 70, 72, 157, 165, 178, 181
Scorpioid cyme, 67, 69-70
Scutellum, 194, 197-198
Seedcoat, 83, 105, 131-135, 148, 154, 257
Septum, 70-71, 81, 83-84, 128-129
Silicula, 77
Silique, 77
Simple fruit, 12, 242, 244-248
Spiciform panicle, 187-188
Spike, 109-112, 114, 125, 131, 153, 176, 178, 187-190, 195-198, 201, 217
Spikelet, 187-193, 195-198, 200-202, 204
Split seed, 131-132
Stigma, 33, 50, 81, 83, 178
Style, 33, 35, 50, 81, 111-112, 114, 116, 148, 165-166, 180-181, 218, 230-232, 244, 246, 249
Umbel, 29-31, 36-37, 147-148
Utricle, 112, 114-116
Wing, 20, 51-52, 83, 97, 125-126, 129, 131, 133, 181, 222
